## Senior Web Developer

Wright is looking for an energetic, scrupulous and progressive web developer to join our development team to aid in the expansion and maintenance of our cutting-edge brand and web presence. The ideal candidate will be comfortable with both front and back-end technologies, with a focus on Object Oriented Programming and future-focus placed on Functional Programming. The big-picture day-to-day is active development/upkeep of our main websites (wright20.com and wright-now.com), numerous behind the scenes administrative web applications and third-party vendor integrations therein.

Our development team is lean, experienced, and hard-working. You are expected to be a vocal and idea contributing part of this team as we continue to push the boundaries of the web. As we are a design company by-and-large the ideal candidate will exhibit attention to detail in both their portfolio and day-to-day collaboration.

Note: Applicants are not required to reside in the Chicago area. We are comfortable and experienced integrating remote workers to our team.

### Tech / Application Stack

Senior level experience in OOP and numerous ancillary technologies. You will be expected to be diverse in your experience and very open to learning new technologies. Please review our tech stack:

Category	In Use / Required	Equivalent / Bonus Points
Agile Project Management	Jira	Public Github Account
Version Control	Git	SVN
Deployment	BitBucket	GitHub
Basic Linux Command Line	Debian	Mac Terminal
SSH/Remote Terminal Usage	SSH, SFTP, Rsync	
Server Side Scripting	PHP, Node.js	Python, Ruby, Go, Elixir
Databases	mySQL, Redis, Elasticsearch	Mongo, Postgres
Web Application Frameworks	Laravel	Ruby on Rails
Front-End Build Toolchains	Webpack	Grunt, Gulp, Make, Rake
Package Managers	NPM, Yarn, Composer	
Message Queues	Beanstalk	Amazon SQS
Javascript	Vanilla Javascript, jQuery	ES6, React, Vue
CSS	Sass, CSS3, Bootstrap	Less
E-commerce	Authorize.net	Braintree
